### Package Contents
- Camera
  - IR and white light source
  - Camera
  - Mounting base
  - Fixed mount
  - Cable bundle access hole
- Additional items
  - 4 x bolts
  - Seal
  - Mini inline coupler for Ethernet
  - M20 nickel-plated brass cable gland

### Connections
- All variants that use the fixed mount, use a pre-terminated cable bundle. The cables are labeled.

**Warning**
- Ensure the power supply is switched off during installation.

**Caution**
- Only install in suitable environments.
  - For more information, see the User Guide.
  - Handle the camera with care so the main electronics and components are not damaged.

**Notices**
- Read this guide before installing the camera.
  - The accessory PSU is IP65 rated (water jets) and must not be immersed under water.

**Regulatory**
- EN 55022 Class A
- EN 61000-3-2
- EN 61000-3-3
- FCC Part 15 Subpart B Class A
- EN 50130-4

- EC60068-2-27 (Shock)
- EC60068-2-6 (Vibration)
- IP65IK10

**Safety Notices**
- When installing the camera, fasten it securely to the surface. A falling camera may cause personal injury.

**Caution**
- Bared ends of any unused connections on the cable bundle should be removed during installation and before powering up the camera.

**Notice**
- Wires from the cable bundle must be grouped as indicated before connecting to the PSU.

1. POWERING UP THE CAMERA

Auxiliary power requirements:
- HD Interceptor Camera with IR150W lighting: 24V AC +/- 10% 125VA Max
- HD Interceptor Camera with IR175 lighting: 24V AC +/- 10% 155VA Max

An optional power supply is available.

Only use a Class 2 isolated power supply for the AC/DC power input.

All variants that use the fixed mount are powered using the auxiliary power connections on the cable bundle.

2. CONFIGURING THE DEVICE

Initial IP properties

<table>

</tr>
<tr>
<td>Default Gateway</td>
<td>10.0.0.1</td>
</tr>
</tbody>
</table>

Prepare an isolated network

Connect your device and the PC you are using to configure it on their own isolated network.

To do this, connect the device to the PC using an Ethernet cross-over cable.

Preparing for initial device configuration

You cannot connect the device to your network until you have changed the IP settings to suit your network.

To change the factory defaults of your device, you must first, temporarily, modify your PC’s network settings.

Make a note of the original value of all settings that are to be changed so that you can re-enter them when you have completed the initial device configuration.

Configure your device

All devices are supplied with their IP address and subnet mask set to 10.5.1.10 and 255.0.0.0 respectively. You cannot connect the device to your network until you have changed these settings to suit your network.

1. Open the Internet Explorer application.
2. Enter the factory default IP address into the browser address bar; then click OK.
   
   Default: 10.5.1.10

3. Click Network on the left of the page.
   The Network page opens.

4. Configure the settings to suit your installation.

Notice

IndigoVision recommends that if you are using DHCP, you should configure the DHCP server to assign a given IP address based on the device’s MAC address. Also, if the device does not receive any response from the DHCP server it will default to using the network parameters supplied by the last completed DHCP request.

Ensure that no two devices share the same IP address (or that of the PC).

3. INSTALLATION

Installation using the cable bundle and fixed mount

When handling the camera with its cable fitted, support the camera body. Do not hold the camera by the cable bundle.

1. Fit the seal (supplied) to the fixed mount.
2. Run the cable bundle down through the fixed mount and out through either the side or base exit holes.
3. Run the cable bundle through the M20 Cable gland (supplied).
4. Attach the cable bundle connector to the camera.
5. Secure the fixed mount to the Mount base using the fixings provided.
6. Tighten the M20 Cable gland and ensure a water-tight seal around the cable bundle.

Reset the default factory settings

If there is a conflict with the camera’s allocated IP address and another IP address on your network you may have to reset the camera back to the default factory settings, including all network connection settings.

1. Disconnect the camera from your network.
2. Power off the camera for three seconds.
3. Power on the camera for four seconds.
4. Repeat step two and three for five times.
5. On the final power on leave the power switched on for at least five minutes to allow the camera to initialise.

Warning

When the optional sunshield is fitted to a camera it is necessary to set the SunShield parameter to OK. This sets the tilt-up limit so that the camera does not hit the sunshield.

For more information on using the Web Configuration pages, refer to the User Guide.
