The IndigoVision Paxton Integration allows alarms and events from Paxton Net2 systems to be seamlessly combined with IndigoVision’s video security solution, giving complete video and alarm management in a single user interface – Control Center.

Trigger live video, move PTZ cameras, start recordings and send notification emails automatically - helping to dramatically decrease operator response time.

Using IndigoVision’s Control Center Software, actions in the Paxton system can also be executed; e.g. locking/unlocking doors, acknowledging Paxton events, silencing controllers, etc.

Key Features

Product Codes
