The IndigoVision Software House C•CURE 9000 Integration Module provides a bi-directional flow of events and alarms between the C•CURE 9000 system and IndigoVision’s complete suite of management software.

The integration allows any C•CURE 9000 event to trigger live video, move PTZ cameras, start recordings and send notification emails automatically in Control Center - helping to dramatically decrease operator response time.

Also, alarms, live and recorded video from the IndigoVision system can be viewed within the C•CURE 9000 interface.

Key Features
